February 1, 2012

Abstracts due

March 9, 2012

Papers selected and authors notified

March 16, 2012

Preliminary program available on the website

April 16, 2012

Registration due

June 12, 2012

Full paper or presentation due

June 12-14, 2012

ESW 2012

About the ESW

The Survivability Workshop is a European forum for the exchange of information and for identifying potential areas of cooperation in the field of survivability.

Survivability is 'the ability to complete a mission successfully in the face of a hostile environment'. The workshop is intended for operational, procurement and research staff in government and industry.

The participating nations are France, Germany, the Netherlands, Norway, Sweden and the United Kingdom. The workshop is an initiative of the research organisations DGA (FRA), EMI (GE), TNO (NL), FFI (NOR), FOI (SWE), DSTL (UK). It is organised under the Europa Memorandum of Understanding.

To enhance the possibility of cooperation, breakout sessions are organised, in which participants can meet and discuss their ideas in a more confined and informal setting. The topics for the sessions will be selected by the steering committee, and will be based upon the abstracts/papers submitted for the workshop. Participants are encouraged to engage in one or more of these sessions.

See you in Halmstad!

ESW2012 invites paper submission on the following topics (classified up to NATOconfidential or the equivalent):

- Military scenarios, emerging threats and operational drivers
- Land systems survivability, including equipments and logistics
- Air platform survivability, including combat, transport, rotary wing aircraft, and unmanned air vehicles (UAV)
- Maritime platform survivability
- Dismounted soldier survivability
- Protection of fixed installations, such as compounds and military infrastructures
- Protection of networks and C4I infrastructure
- Survivability modelling
