## **Marshall of Aerospace and NODIN Aviation sign Collaboration Agreement**

Cambridge, UK/Tønsberg, Norway:

Marshall Aerospace and NODIN Aviation have signed a collaborative agreement to enable the provision of a “one stop shop” for Aerial Medical Evacuation (MEDEVAC) Solutions.

Leveraging NODIN’s MEDEVAC project experience and Marshall’s wide ranging platform experience and expertise in lightweight structural aircraft solutions, the companies have already developed proven solutions. The first development was a military Patient Transportation Support System (PTSS), featuring an integrated folding leg mechanism along with equipment and oxygen bays, which transports patients on standard NATO stretchers from the field to a cargo aircraft in a single integrated solution. The most recent development of the partnership, the 737 Role Change System goes one stage further to provide a full role change capability in less than four hours. It is not only fully equipped with medical systems, oxygen and stretchers; it also incorporates a unique two bay rack which literally folds “out of the box” in less than five minutes. This provides the ideal quick change, minimal footprint, disaster relief solution that is adaptable to both commercial and military platforms.

Under this collaborative agreement Aerial Medical Evacuation Customers can now obtain a full suite of integrated solutions from a single provider with a proven and established capability to deliver MEDEVAC solutions to any Aircraft platform.

### **Notes to Editors**

Marshall of Cambridge Aerospace Ltd: With over 1700 employees, Marshall Aerospace provides the complete design, manufacture and test of aerospace components, whilst providing specialised project management for complex aerospace structures, assemblies and systems. Situated in Cambridge UK, and with offices in Canada and Australia, the Company works closely with all the major aircraft OEM’s.

NODIN Aviation AS: NODIN is a Norwegian company dedicated in the development and delivery of equipment and concepts for safe evacuation of patients throughout the chain of evacuation. NODIN has aided customers in developing rapid MEDEVAC/CASEVAC capacity on existing platforms, Air, Ground and Sea, by providing innovative Role Equipment. Their strength is rapid concept development and prototyping based on years of MEDEVAC project experience.
